

Aiding Library setup and book organization; e.g.,

Swanson, Victoria <viswanson@caldwell.edu>

Mon, Apr 11, 2022, 12:23 PM

to me, Peter, Ellina

Thank you so much Vlad, this is such a great breakdown and so informative. I really appreciate your help with this.

I'd love for you to be in on a meeting with Laura from IT about this all. I'm meeting with Peter & Ellina next Friday so I will set up a meeting with you & Laura after that day.

As far as the space in the back of the reference room...I spoke to Ray from facilities:

He will price carpet (if that's what you want) in a couple weeks when the carpet guys come to campus but he thinks it will cost around \$3,000.

Painting the space will be done in-house, hopefully by his student workers this summer & will cost the price of paint.

A new glass door with a card key swipe will be very expensive - around \$20,000. If this is something we really want to price out, Ray would like Peter to discuss with Sheila first.

Below are the 2 tables that make a hexagon that were folded up in the creation station. They measure 60" x 52". You're welcome to use them if you think they would work in the new space.

Thanks again for all the info & I look forward to continuing this project!

Vlad:

This is a great breakdown of needs/costs, thank you.

I am adding Peter to the conversation.

Peter:

This write-up is for the maker space room, Victoria wants to rebrand it into the VR experience room for the students. This is NOT for Vlad's VR lab. Victoria is looking at upgrading the maker space room and Vlad and I met last week to talk it over. The write-up Vlad shared is the result of this conversation.

The conversation about the VR Lab in the back of the library is related yet separate as Vlad would need computers (3), a movable glass board (1), and additional VR headsets for the Lab. I imagine some of the same things Vlad listed in the email to Victoria would also need to be purchased but let's wait for Vlad to give us detailed specs. As I mentioned to you earlier, Vlad already has four students for his research course in the fall and I would love to outfit the room by the beginning of the fall semester. I do realize it is subject to budgetary approvals and will work to give you a complete budget breakdown as soon as Vlad gives me the specs and costs.

The room in the back of the Library is good for the Lab as per our talk with Vlad last week. He believes the room can fit a set of computers, and space for VR and the room needs only minimal upgrades (Flooring, fresh coat of paint, new glass door) to have all that he needs.

If we can find the money to make that work, it would be great.

I am happy to discuss.

Many thanks, Peter.

Hey Victoria,

Thank you for taking the time to meet with me last week!

Here is what I suggest you purchase to turn that room into a VR space:

Library VR space.png

- 2 Oculus Quest 2 headsets (\$300 x 2 = \$600)

Why Oculus: this is the cheapest standalone headset that has everything

Why 2: when battery runs out on one, you plug it in and start using the second one

** there are other good vr headsets, including one that is VERY lightweight and comfortable (HTC Vive Flow), but they all have drawbacks (e.g., Vive Flow has no hand controllers, so it's only for viewing immersive media, not interacting with it); if you want to discuss alternatives, let me know.

- AA batteries

Why: for oculus controllers

- android tablet (or phone) (\$200-\$400, though IT may already have one)

Why: to set up and control the oculus, and be able to cast to TV without having to ask the VR user to cast

- camera in the room, and tv/monitor mounted outside to show what the view of the room

Laura at IT will be better suited than I to help you with the details of what to get, how to set this up, and what to purchase. I'd be happy to meet with Laura and to help with guidance on this setup

- TV or monitor mounted outside the room to display what VR user is seeing

(this could be the same TV/monitor that is used for displaying the feed from the camera, if it enables picture-in-picture)

if this is a TV w/ chromecast built-in, we should be able to cast directly from VR headset to it.

if not, we'll also need to purchase:

- chromecast (\$30 - \$40)

e.g., https://store.google.com/us/config/chromecast_google_tv?hl=en-US)

Why: Oculus can display what user is seeing directly to chromecast

- a separate wifi6 router

price and setup: this is a conversation better had with Laura at IT

Why a separate router and not CUWiFi: We do not want to tax caldwell wifi with VR cast traffic, nor slow down the VR cast with caldwell traffic.

- Additional headset facial interface covers (~\$20 each)

e.g., <https://www.amazon.com/dp/B099WN4MKW>

e.g.,

<https://www.amazon.com/DESTEK-Interface-Anti-Light-Breathable-Accessory/dp/B09GVP66YP>

Why: it will be more hygienic to switch covers between users

- a small fan aimed at the middle of the room

Why: the direction of air provides sensory feedback to the VR user and prevents some motion sickness

- a small and thin area rug (2 to 3ft in diameter), placed in the middle of the room

e.g.,

<https://www.amazon.com/Safavieh-Collection-Bohemian-Distressed-Diameter/dp/B073HPF4CD>

Why: this provides tactile location feedback for the VR user, that way they know they are still in the middle of the room

- a spinning portable chair. (there's no reason why this cannot be a standard office chair.)

Why: some folks will want to stand for their VR experience, and some will want to sit. So having a spin-chair in the corner of the room would be good, and if then whomever is using the VR can

decide whether to move the chair to middle of the room and sit, or juts to stand.

- ginger gum

e.g., <https://www.amazon.com/Simply-Gum-Ginger-Chewing-Pieces/dp/B00K1E5LV8>

Why: motion sickness relief for folks that get motion sickness

- sea bands

e.g.,

<https://www.amazon.com/Sea-Band-Wristband-Anti-Nausea-Acupressure-Sickness/dp/B0004L4D0DU>

Why: motion sickness relief for folks that get motion sickness

I'd be happy to meet with you and Laura if you need to discuss any details.

-vlad
